**FOR IMMEDIATE RELEASE**

## **LINKPRO'S FILE REPLICATION SOFTWARE PROVIDES CONTINUOUS DATA PROTECTION**

*IPREPLICATOR® provides continuous disk-to-disk backup  
over LANs, WANs and the Internet*

**NEWPORT BEACH, Calif., Mar. 19, 2007** – LinkPro Technologies, Inc., a leading developer of File Replication and Backup Software, supplies continuous disk-to-disk backup software for the enterprise. “We specialize in solutions that provide scalable, secure & automated data movement and backup over LANs, WANs, & Internet while minimizing & controlling bandwidth use, even thru firewalls,” said Frank Reinhart, president of LinkPro.

IPReplicator's unique replication technology performs real-time, scheduled or manually triggered backups. One-to-one or one-to-many disk-to-disk backups are supported while conserving bandwidth. These capabilities combine to satisfy the need continuous remote office data protection for the enterprise.

IPReplicator's distributed replication agents combined with intuitive central management operate automatically over LANs, WANs or the Internet. It provides file replication and backup of a whole range of enterprise data. It does this while conserving network resources and replicating over secure TCP/IP connections, even from behind firewalls.

“IPReplicator offers compelling value: At 1/3 the price, it delivers the core features of its major competitors making it a very cost effective solution for those organizations having Windows based servers connected by TCP/IP networks.” Reinhart said.

List price for IPReplicator, including two server licenses, is \$1,498. Additional licenses start at \$599 each and volume discounts are available. A free 30-day trial download is available from [www.linkpro.com](http://www.linkpro.com).
