FOR IMMEDIATE RELEASE

LINKPRO'S SITE SERVER REPLACEMENT AUTOMATES WINDOWS WEB SITE PUBLISHING

IPREPLICATOR® provides automated Web site publishing and deployment

NEWPORT BEACH, Calif., Aug. 31, 2009 – LinkPro Technologies, Inc., a leading developer of File Replication and Publishing Software, offers a replacement for site server for web site publishing. "Efficient web site publishing from a staging server to multiple production Web servers has become a necessity for today's organizations. Web pages, images, and streaming videos are updated on a regular basis 24X7. IPReplicator® is a replacement for Site Server web site publishing and deployment." said Frank Reinhart, president of LinkPro.

IPReplicator's unique replication technology performs real-time, scheduled or manually triggered web site updates. One-to-one or one-to-many web content publishing through firewalls is provided while conserving bandwidth. These capabilities combine to satisfy the need of web content developers and editors for centrally administered, event driven or "push button", web content publishing.

IPReplicator's distributed replication agents combined with intuitive central management operate automatically over LANs, WANs or the Internet. It provides file replication and backup of a whole range of enterprise data. It does this while conserving network resources and replicating over secure TCP/IP connections, even from behind firewalls.

Page 2/LinkPro Replication Software

“IPReplicator offers compelling value: it a very cost effective web publishing solution for those organizations having Windows based servers connected by TCP/IP networks.” Reinhart said.

List price for IPReplicator, including two server licenses, is \$980. Additional licenses start at \$490 each and volume discounts are available. A free 30-day trial download is available from www.linkpro.com.

Minimum system requirements: Windows NT/2000/2003 operating system software; 256MB RAM; 50MB disk space; VGA monitor, and CD-ROM drive.

LinkPro Technologies, Inc., based in Irvine, Calif., is a privately held corporation that specializes in File Backup, Mirroring and Publishing software. Its products are sold worldwide through value-added resellers, international distributors, direct sales and original equipment manufacturers (OEMs).
